Designer Freedom in the RGV

Our partnership would enable you to create structural innovations at ease.

With the ability to showcase a wide range of shapes, we pride ourselves in providing a creative opening for any architectural idea to thrive. There are infinite options to create any slender and elegant long span model, a reality.

Never before did the RGV have the local capacity to produce any complete parking garage project. From conception to complete installation we bring years of experience to an area in great development, where bigger and modern structures are constantly in much need.

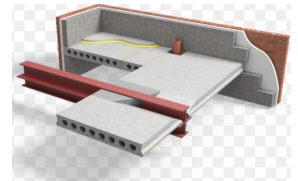

Architects and Engineers can now let the creativity fly to produce the most exquisite projects in their imagination. It does NOT cost more to design a beautiful structure that reflects each designer's character.

When economic solutions become part of the project's objective, make sure to count with PRECONTX as your partner in designing an appropriate precast solution that enables to supply the benefits to all parts involved.

The Hollow Core structure is one of the most friendly products used in the market. Usually used with a 2" topping it's design leave ample spaces to allow for tall ceilings and long spans.

Beams produced under FHWA regulations are available to be produced as per project requirements. Our experience brings to the market Prestressed and Post Tension solutions as per PCI and PTI specifications.

When POST TENSION is the best solution, Slabs on Ground (expansible soils), Elevated Slabs, or Post Tensioned Beams, we can help you get friendly service that meets high quality demands. The result can only be a much better and more efficient end product that complies and surpasses any client's needs and requirements. If experience is what your customers are looking for, you've come to the right place.
